DESCRIPTION: This course which is primarily designed for Ph.D. students covers areas of active empirical research on the effects of taxes and government spending programs. The areas covered are welfare economics, quasi-experimental and structural estimation methods, income taxation and labor supply, the effects of welfare and social insurance programs including AFDC/TANF, social security, unemployment insurance, workers’ compensation, and disability insurance. The emphasis in the course will be on empirical research. Those who are not Ph.D. students must have instructor’s permission.

EVALUATION: Participation in class discussions, a 15 double-spaced page research proposal due Thursday, March 12 and an in class final exam on Tuesday, March 17. For master’s students I will substitute a literature review for the research proposal.
